Microdermabrasion Consent Form

Microdermabrasion uses a diamond encrusted wand to remove superficial layers of the skin in the areas treated. The intensity of the procedure can be adjusted to your desired results and comfort level.

Microdermabrasion is often used to treat acne, reduce the appearance of scars, wrinkles, hyperpigmentation and other skin conditions. A series of treatments is recommended for maximal results. After a treatment skin may feel tight and warm as if exposed to the sun or wind but this should resolve within 24 hours. Slight redness and swelling might appear with more intensive treatments and take several days to resolve. Your fresh, newly exposed skin will be delicate. It is important that you use a mild basic cleanser and keep the skin well moisturized particularly around the delicate eye area. You should use a full spectrum sunblock daily. We recommend a physical sunblock containing zinc as it is less irritating to sensitive skin. Avoid the use of Retin-A, Renova, alpha or beta hydroxyl acid products and all forms of scrubs for at least 24 hours after a treatment. Avoid swimming and tanning beds for at least one week.

I acknowledge that no guarantee has been given regarding the condition of my skin or the percentage of improvement expected following treatment. I understand that no specific results are guaranteed.

Contraindications

- Although it is impossible to list every potential risk and complication, the following conditions are recognized as contraindications for microdermabrasion treatment and must be disclosed prior to treatment.
- Active infection of any type, such as Herpes simplex virus or flat warts.
- Active acne Sunburn
- Recent use of topical agents such as glycolic acids, alpahydroxy acids and Retin-A
- Any recent chemical peel procedure
- Uncontrolled diabetes Ecema, dermatitis
- Skin cancer
- Vascular lesions
- Oral blood thinner medications
- Rosacea
- Tattoos (not effective)
- Pregnancy
- Use of Acutane within the last year
- Family history of hypertrophic scarring or keloid formation
- Telangiectasia/erythema may be worsened or brought out by skin exfoliation

Post-Treatment/Home Care

Aerobic exercise or vigorous physical activity should be avoided until all redness has subsided. Direct sunlight exposure is to be completely avoided immediately following the treatment (including any strong UV light exposure and tanning beds). If some sun exposure cannot be avoided, first apply sunscreen with an SPF of 30 or greater. Although sunscreen should be a part of your daily skin care, for a minimum of two weeks, a sunscreen with at least a SPF of 15 must be applied. Cleanse your face with water or a mild soap substitute such as Dove soap. Twice daily followed by a mild sunscreen with minimum SPF 30). If a site other than the face is treated, you only need to cleanse once daily, followed by sunscreen. In the event that you may have additional questions or concerns regarding your treatment or suggested home product / post-treatment care, you must consult Flawless Fillers.

I understand the potential risks and complications and have chosen to proceed with the treatment after careful consideration of the possibility of both known and unknown risks, complications, and limitations. I agree that this constitutes full disclosure. I certify that I have read, and fully understand the above paragraphs and that I have had sufficient opportunity for discussion to have any questions answered. I certify Flawless Fillers to use photographs and confidentiality will be maintained.
